

Procedure for the connection to The Gas Transmission System

Connection of new gas facilities to the operating Natural Gas Transmission System is a service provided by the Transmission System Operator to owners, users or operators of the new gas systems. The connection service is provided upon conclusion of a respective connection service contract.

New natural gas systems are connected to the operating Natural Gas Transmission System upon the submission to AB Amber Grid of a connection request ([Application for the Connection](#)).

Key legal acts governing the connection of new systems to the Gas Transmission System of AB Amber Grid:

- Procedure for the connection of new natural gas systems, direct gas pipelines and biogas production plants to AB Amber Grid's gas transmission system ([Procedure for connection of new gas systems.pdf](#))
- Description of the Procedure for the Installation of New Gas Transmission or Distribution systems in Unconnected Areas, for the Connection of Natural Gas Systems of New Customers to the Existing Gas Transmission or Distribution Systems and for the Installation of New Customers Natural Gas Systems ([Description of the Procedure for the Installation of New Gas Systems.pdf](#) - the document is presented in Lithuanian)
- Description of the Terms and Conditions for the Connection of New Natural Gas Systems, Direct Gas Pipelines and Biogas Production Facilities to the Operating Natural Gas Transmission or Distribution Systems ([Description of the Terms and Conditions for the Connection of New Gas Systems.pdf](#) - the document is presented in Lithuanian)
- Methodology for the Pricing of the Service of the Connection to the Natural Gas Systems of New Natural Gas Consumers, New Natural Systems and Biogas Plants ([Methodology for the Pricing of the Service of the Connection to the Natural Gas Systems Service.pdf](#) - the document is presented in Lithuanian)
